Flour and Breads and Their Fortification in Health and Disease Prevention, Second Edition, presents the healthful benefits of flours and flour products and guides the reader on how to identify opportunities for improving health through the use of flour and fortified flour products. The book examines flour and bread related agents that affect metabolism and other health-related conditions, explores the impact of compositional differences between flours, including differences based on country of origin and processing technique, and includes methods for the analysis of flours and bread-related compounds in other foods. This revised, updated edition contains new research on diverse flours with an emphasis on nutrients and nutraceuticals as

supplements, thus making this content a timely reference for both nutritionists and food scientists. Presents the healthful benefits of flours and flour products Guides the reader in identifying opportunities for improving health through the use of flour and fortified flour products Examines flour and bread related agents that affect metabolism and other health-related conditions Explores the impact of compositional differences between flours, including differences based on country of origin and processing technique

Brings together practical information previously available only in numerous separate sources. Handbook of Analytical Derivatization Reactions begins with an overview of analytical derivatization with a section on apparatus. Describes analytical derivatization methods organized according to the sample to be derivatized. Discussion of methods includes derivative type, reagent, sample type, reaction, and typical procedure with comments and references for each.
