The Hummer H3 is an off-road vehicle that was produced from 2005 to 2010 by General Motors. The smallest model of the Hummer lineup, it was offered as a 5-door SUV or a 4-door pickup truck known as the H3T. Unlike the larger H1 and H2 models, the H3 was not developed by AM General. It was introduced for the 2006 model year, based on a modified GMT355 that underpinned the Chevrolet Colorado/GMC Canyon compact pickup trucks that were also built at GM's Shreveport Operations in Shreveport, ...

Straight from the auction block! Old Car Weekly's Old Car Auction Bible is your handy resource for collector vehicle auctions from all corners of the U.S. In it, the publishers of Old Cars Weekly and Old Cars Report Price Guide have compiled more than 40 important sales from around the country that can give hobbyists a true picture of what cars are selling for and where the collector car market is headed. All the big auction houses are represented: Mecum, Russo and Steele, Barrett-Jackson, RM Auctions, Auctions America, Worlwide, Bonham's, Gooding and many more.

Part company history, part business tale, and part action novel, Hummer tells the story of the Humvee's rise from a utility vehicle bred for military use to a suburban status-symbol. More than a simple story of GM's clever branding scheme at a perfect juncture in automotive, consumer, and world histories, this book is a cultural dissection of what images make American's open their pocketbooks so readily, and how buying American consumers was never so easy-or conflicted. - The H2 is a huge hit for GM- Hummer is an American icon like the Corvette and Ford Pickup- This books offers a fun-to-read story- H3 is on its way in 2006- Interest continues to grow in this unique vehicle, with buyers pushing GM production numbers up for the HummerAmerican's got their first real look at the Hummer during the first Gulf War.

Interestingly, because of the advent of 24-hour news at this same point in time, the Gulf War served as priceless free advertising for AM General's war machine. After seeing the Hummer in action, movie star Arnold Schwarzenegger reportedly helped to convince AM General to prep the Hummer for civilian sales and was one of the first to own one. The attention garnered by Schwarzenegger and other celebrities like Tom Clancy, Shaquille O'Neal, G. Gordon Liddy, and any other high-profile American with \$100,000 to spare spurred General Motors to acquire the Hummer name for a new range of smaller SUV's. With a well-timed second war in Iraq, General Motors saw sales of its Hummer H2 skyrocket, just as "Ahnuld" prepared for the debut of the third installment of his Terminator movies, which cemented his Hollywood status as the king of action movies since the first battle in Iraq. They say timing is everything. With the exploration

of everything from consumer buying habits and American economics to global military action and big-budget Hollywood star power, HUMMER tells the story of how priceless and valuable timing has been for America's largest and most recognizable SUV. About the Author Martin Padgett is the editor of the Web's Automotive Authority, www.TheCarConnection.com, and contributes regularly to Stuff magazine as the resident "road warrior." He also writes car news and columns for Import Tuner, Edmunds.com, and other publications. Padgett lives in Atlanta's Morningside neighborhood with his partner of seven years and four cats, an ever-changing roster of cars in the driveway, and easy access to the Gulf Coast.

Although computational modeling and simulation of material deformation was initiated with the study of structurally simple materials and inert environments, there is an increasing demand for predictive simulation of more realistic material structure and physical conditions. In particular, it is recognized that applied mechanical force can plausibly alter chemical reactions inside materials or at material interfaces, though the fundamental reasons for this chemomechanical coupling are studied in a material-specific manner. Atomistic-level simulations can provide insight into the unit processes that facilitate kinetic reactions within complex materials, but the typical nanosecond timescales of such simulations are in contrast to the second-scale to hour-scale timescales of experimentally accessible or technologically relevant timescales. Further, in complex materials these key unit processes are "rare events" due to the high energy barriers associated with those processes. Examples of such rare events include unbinding between two proteins that tether biological cells to extracellular materials [1], unfolding of complex polymers, stiffness and bond breaking in amorphous glass fibers and gels [2], and diffusive hops of point defects within crystalline alloys [3].

Kinetochores orchestrate the faithful transmission of chromosomes from one generation to the next. Kinetochores were first depicted over 100 years ago, but kinetochore research has progressed by leaps and bounds since the first description of their constituent DNA and proteins in the 1980s. "The Kinetochore: from Molecular Discoveries to Cancer Therapy" presents a thorough up-to-date analysis of kinetochore and centromere composition, formation, regulation, and activity, both in mitosis and meiosis, in humans and "model" eukaryotic species, and at natural and mutant neocentromeres. Recently initiated translational research on kinetochores is also discussed as kinetochores are being mined as a very rich target for the next generations of anti-cancer drugs.

This open access book, published under a CC BY 4.0 license in the Pubmed indexed book series Handbook of Experimental Pharmacology, provides up-to-date information on best practice to improve experimental design and quality of research in non-clinical pharmacology and biomedicine.

This book is a uniquely pedagogical while still comprehensive state-of-the-art description of LCA-methodology and its broad range of applications. The five parts of the book conveniently provide: I) the history and context of Life Cycle Assessment (LCA) with its central role as quantitative and scientifically-based tool supporting society's transitioning towards a sustainable economy; II) all there is to know about LCA methodology illustrated by a red-thread example which evolves as the reader advances; III) a wealth of information on a broad range of LCA applications with dedicated chapters on policy development, prospective LCA, life cycle management, waste, energy, construction and building, nanotechnology, agrifood, transport, and LCA-related concepts such as footprinting, ecolabelling, design for environment, and cradle to cradle. IV) A cookbook giving the reader recipes for all the concrete actions needed to perform an LCA. V) An appendix with an LCA report template, a full example LCA report serving as inspiration for students who write their first LCA report, and a more detailed overview of existing LCIA methods and their similarities and differences.

The all-new Hummer H3 will reach market in early 2005, just as this book chronicling its development is published. The H3 will offer traditional Hummer off-road durability and stump-pulling power in a smaller, more-affordable SUV-styled package. Interest in the new model is very high and the automotive website "edmunds.com" reported, ". . . the smaller and cheaper H3 is likely to become the most popular Hummer ever."
