Indeed, studies of the past million years indicate a repeatable cycle of Earth's climate going from warm periods ("interglacial", as we are experiencing now) to glacial conditions. The period of these shifts are related to changes in the tilt of Earth's rotational axis (41,000 years), changes in the orientation of Earth's elliptical orbit around the sun, called the "precession of the equinoxes" (23,000 years), and to changes in the shape (more round or less round) of the ...

Are we heading into a new Ice Age? - Skeptical Science

Although the Little Ice Age was not a formal ice age, one could certainly argue that it was a significant phenomenon associated with a variety of climatic changes affecting many disparate parts of the world. Earth's climate changes often through time, so this cool 450-year slice of Earth's history was not the only one of its kind. There have been warm intervals too.

The Little Ice Age changed New England history in ways that historians are only beginning to understand. Though scientists don't agree on what caused the Little Ice Age, most agree the climate cooled from the 15th century to the middle of the 19th century, with the greatest intensity between 1550 and 1700. Some scientists peg the coldest period even more narrowly, between 1645 and 1715.
