Dynamics And Control

~~Structural Dynamics
and Adaptive Structures~~

Adaptive structures
have the ability to adapt,
evolve or change their
properties or behaviour
in response to the
environment around
them. The analysis and
design of adaptive
structures requires a

Adaptive

Structures

called adaptive structures. An adaptive structure is a structure that actually senses a

change in its

environment and adapts to compensate for forces applied against it. These structures contain

sensors, actuators and controllers that sense a force from the

environment and adjust the shape, making the

Get Free Adaptive

structures more rigid or
more flexible depending
upon the force.
