Martin Heidegger's work is pivotal in the history of modern European philosophy. The New Heidegger presents a comprehensive and stimulating overview of, and introduction to,

the work of one of the most influential and controversial philosophers of our time. Heidegger has had an extraordinary impact on contemporary philosophical and extra-philosophical life: on deconstruction, hermeneutics, ontology, technology

ontology and its

questions in
metaphysics give rise
to a series of puzzles
that suggest that we
don't fully understand
what ontology is

what ambitions
metaphysics can have
for finding out about
what reality is like.

Thomas Hofweber

aims to solve these puzzles about ontology and consequently to make progress on four central metaphysical problems: the philosophy of arithmetic, the metaphysics of ordinary objects, the problem of universals, and the question of whether the reality is

independent of us.

Crucial parts of the proposed solution involve considerations about quantification and its relationship to ontology, the place of reference in natural languages, the possibility of ineffable facts, the extent of empirical evidence in metaphysics, and whether metaphysics

can be properly
esoteric. Overall,
Hofweber defends a
rationalist account of
arithmetic, an
empiricist picture in
the philosophy of
ordinary objects, a
restricted form of
nominalism, and
realism about reality,
understood as all
there is, but idealism
about reality,
