Jacques Barzun, the noted Columbia University historian of ideas and culture, once described the feeling that some people experience when they come upon a new reference book. He wrote: "Hand over to one of us a new Dictionary, "Companion," or Guide, and our eyes first light up and then turn dreamy: we have seized the volume and are off, arm in arm with the guide i or companion. ..." The book now in your hands made my eyes light up. Thyroid Disorders with Cutaneous Manifestations is that kind of book. Heymann, who has been fascinated by this sometimes controversial subject for decades, has brought not only his own expertise, but that of many experts from the fields of the skin and the thyroid gland. Steven Jay Gould wrote about overlapping and nonoverlapping magisteria—this book demonstrates just how much important overlap there is. thyroid and thyroidologists can find what they need to know about the skin. Thyroid Disorders with Cutaneous Manifestations falls neatly into the tradition of medical monographs that become standards. They fulfill the roles of gathering, digesting, and synthesizing current knowledge, and they do so in a way that review articles cannot approach and that the scientific literature is not designed to accomplish.

It is a pleasure to introduce this new book, *Clinical and Pathological Aspects of Skin Diseases in Endocrine, Metabolic, Nutritional, and Deposition Disease*, edited by two of my friends and respected colleagues, Franco Rongioletti and Bruce R. Smoller. In fact, I was very enthusiastic when I learned that they were preparing this work. Although endocrine, metabolic, w, and deposition diseases are regularly included in general textbooks of dermatology and dermatopathology, one gains the general impression that these topics receive little emphasis and are mainly included for completeness. The prospect of having all of this information in one volume, lovingly described and detailed by experts in the field, should be of great interest not only to dermatologists, pathologists, and dermatopathologists but also to internists and endocrinologists, who may well gain a different perspective on these disorders. As a dermatopathologist, I am also pleased that this project has been organized and undertaken by two distinguished authorities in cutaneous pathology. This assures a close integration of histology and other laboratory techniques with the clinical aspects of these disorders, which will make it possible - perhaps for the first time - to view these conditions in a truly comprehensive way. So I invite you, the reader, to open this volume and dig in; be prepared for an eye-catching, intellectually stimulating, and ultimately rewarding experience! Charlottesville, VA James W. Patterson v w Foreword II Dermatopathology is a bridge between Dermatology and Pathology.

This book represents 25 years of clinical experience. In it, Dr. Probst and his expert contributors correlate dermatology and internal medicine by describing the dermatologic manifestations of systemic disease, from rheumatoid arthritis to Raynaud's disease to pericarditis. Each chapter is co-authored by a dermatologist and a medical specialist. Topics covered include the cutaneous manifestations of connective tissue diseases; nonimmunologic arthritides; immune and complement deficiencies; malignancies; hematologic disorders; endocrine diseases; gastrointestinal diseases; metabolic diseases; neurologic diseases; infectious diseases; and AIDS. Miscellaneous putative autoaggressive diseases, autoimmune bullous diseases, and oral manifestations of systemic diseases are also covered.

Through a unique presentation of clinical photographs and accompanying histologic photomicrographs, *Clinical and Pathological Aspects of Skin Diseases in Endocrine, Metabolic, Nutritional and Deposition Disease*

provides the practicing surgical pathologist, dermatologist, endocrinologist, internal medicine physician and dermatopathologist with a single volume source that reviews the clinical and pathologic features of metabolic and endocrine disorders that display cutaneous manifestations. Color photographs are presented for each condition followed by a series of photomicrographs depicting each entity microscopically. The text includes Clinical Features, Pathology, Etiopathogenesis, Differential Diagnosis and Therapy for all entities, described in a clear, concise style. In-depth discussions of the clinical findings, as well as the histologic features of these diseases are included. Additionally, laboratory data used to make and support the diagnoses is discussed for each entity. The first section covers metabolic disorders that have cutaneous manifestations. Diseases organized by the endocrine organ primarily responsible for the systemic condition are covered. For each entity, an atlas of clinical manifestations is presented that will serve as a "bed-side" clinical reference, followed by a series of photomicrographs depicting the histologic changes. This unique format of presentation is followed throughout the volume in the second through fourth sections addressing Metabolic Diseases, Nutritional Disorders that affect the skin and finally Cutaneous Deposition Disorders. Clinical and Pathological Aspects of Skin Diseases in Endocrine, Metabolic, Nutritional and Deposition Disease is a unique reference for the practicing dermatopathologist, general pathologist reviewing skin biopsies, general dermatologists, internists and endocrinologists.
