Cytomegalovirus (CMV) Infection - Infectious Diseases ...

Cytomegalovirus infection is caused by the human cytomegaloviruses (also known as “ salivary gland viruses ”). These are a subgroup of infective agents closely related to the herpes group of viruses. Like other herpes viruses, they may remain latent for years in people.

Cytomegalovirus Infection - NORD (National Organization ...

Abstract The redeployment of NK-cells in response to an acute bout of exercise is thought to be an integral component of the "fight-or-flight" response, preparing the body for potential injury or infection. We showed previously that CMV seropositivity impairs the redeployment of NK-cells with exercise in the young.

Cytomegalovirus Infections Of Man

Cytomegalovirus (CMV), a type 5 herpesvirus, is a common virus found around the world that infects people of all ages. Between 50 percent and 80 percent of adults in the United States have had a cytomegalovirus infection by age 40. In the United States, nearly one in three children are already infected with cytomegalovirus by age 5 years.

Cytomegalovirus - Causes, Symptoms, Diagnosis, Prevention ...

The occurrence of circulating immune complexes was investigated in 31 patients with cytomegalovirus infection (29 infected in utero and 2 with natal infection) and 34 uninfected controls. Anti-complementary activity above 1:20 occurred in 34% (29/86) of the sera tested from the infected group in contrast to 7.5% (3/40) in the controls ($P < 0.005$). When assayed by means of a lymphoblastoid cell ...
