"Despite the rediscovery of the inequality topic by economists as well as other social scientists in recent times, relatively little is

Known about how economic inequality is mediated to the wider public of ordinary citizens and workers. That is precisely where this book steps in: It draws on a cross-national empirical study to examine how mainstream news media discuss, respond to, and

engage with such important and politically sensitive issues and trends. Clearly, economic inequalities have become increasingly prominent issues in recent public debates, not least in the context of the latest Great Recession that followed from the financial crash in

studies. Yet, in precisely those two academic fields we find important and parallel 'blindspots' which underline the distinctive focus and contribution of the present book: On the one hand, key issues related to economic inequalities (much like economic processes in general),

Ebook

have been much neglected in the academic fields specialising in news media and journalism studies. On the other hand, the major schools of theory and analysis in mainstream economics have paid relatively little explicit attention to the evolving scope,

role or implications of mediated communication. This blindspot applies to both the conduct and performance of economic processes in general, as well as to engagement with the highly sensitive sub-arena of economic inequalities which is of particular interest in this book.

The core thesis of this book is that to understand the implications of incentive structures in modern higher education, we require a deeper understanding of associated issues in

Download

Ebook

the philosophy of science. Significant public and philanthropic resources are directed towards various forms of research in the hope of addressing key societal problems. That view, and the associated allocation of resources, relies on the assumption that

Download

Ebook

academic research will tend towards finding truth or at least selecting the best approximations of it. The present book builds on, and extends, contributions in philosophy and higher education to argue that this assumption is misplaced: with serious implications

for modern higher education and its role in informing societal decisions and government policy. The book develops a philosophical foundation for the analysis of the connection between higher education incentives, scientific progress and societal outcomes. That in

turn is used to demonstrate how the current approach to incentivising intellectual and scientific progress is likely not only to fail, but in fact to cause harm on the very dimensions it purports to improve. The arguments presented are illustrated with

examples from  
medicine and  
academic economics,  
making the book one  
of the first to examine  
issues of scientific  
progress and social  
consequences across  
the human and social  
sciences. In doing so,  
it develops a novel  
critique of modern  
economics that in  
turn provides a more

popular critiques of  
economics than has  
existed to date.
