Since this is a closed system, the conservation of mass equation yields no useful information, as the mass of the system is constant. However, the

conservation of energy (the first law of thermodynamics) is very useful here:  $1 Q 2 \square 1 W 2 = m [ ( u 2 \square u 1 ) + V 2 2 \square V 1 2 2 g c + g ( Z 2 \square Z 1 ) g c ]$

system.

Thermodynamics is the theoretical foundation for any type of electrochemical concentration (or galvanic) cell. It depicts the fundamental relationship

between thermodynamic quantities and electrical quantities; this relationship not only allows determination of thermodynamic properties of materials by

accurate electrochemical methods, but also defines the maximum cell voltage of a specific chemical reaction and its dependence on concentration, temperature, and pressure.
