Food for Gestational Diabetes offers an alternative to the conventional nutrition approach that embraces nutrient-dense and delicious foods that nourish you and baby without causing high blood sugar. With the wrong information (or no information at all), far too many women are left alone struggling with erratic blood sugar and excessive weight gain, often leading to high doses of insulin or medications. Sadly, this often happens despite these moms dutifully following the dietary advice given to them by well-meaning clinicians; a restrictive diet that leaves them feeling unsatisfied, unhappy, and confused about ever increasing blood sugars. In Real Food for Gestational Diabetes, prenatal nutritionist and diabetes educator, Lily Nichols, RDN, CDE, CLT, sets the record straight, offering revamped carbohydrate recommendations and exercise guidelines based on the latest clinical research. You can have gestational diabetes and have a healthy baby. Lily will show you how. With this book, you have the tools to turn this diagnosis into a blessing in disguise. You'll learn: Why conventional diet therapy often fails and what to do instead How the right prenatal nutrition can reduce the likelihood you'll need insulin by 50% Exactly which foods raise your blood sugar (and more importantly, which foods DON'T raise your blood sugar) How to customize a meal plan with the right amount of carbohydrates for YOU (there's no one-size-fits-all plan, despite what you may have been told) The truth about ketosis during pregnancy (and why checking urine ketones isn't useful) Information on insulin and blood sugar-lowering medications used in pregnancy Which foods to emphasize to provide your baby with the right nutrients for optimal development (these real foods have a long history of producing strong, healthy babies) The best prenatal exercises to control your blood sugar and prepare for labor What to do after delivery to prevent type 2 diabetes

Finding out you have gestational diabetes can be very frightening as not only do you have to deal with all the emotions (the ups and the downs) and the questions that come with being pregnant, but also the uncertainty of this new-found condition. Gestational diabetes occurs when you have hyperglycemia (high blood glucose levels) during pregnancy. Gestational diabetes usually develops in the third trimester (between 24 and 28 weeks) and typically disappears after the baby is born. Women who develop gestational diabetes during pregnancy are more likely to develop type 2 diabetes later on in life. Fortunately, as with all types of diabetes, there are many well-informed health professionals to help answer your questions and to guide you through this very important time in your life. The more you know, the easier it is to accept and make the necessary changes for a successful and happy pregnancy. In this book, I've explained the type of diet that an individual should follow during pregnancy if they have gestational diabetes, including which foods to eat and avoid. We also consider other treatment options for gestational diabetes and the possible complications that may occur.

Pregnancy is one of the greatest miracles of life. It is difficult to comprehend how something microscopically tiny can grow for 40 week into a tiny human being inside your body! A very important thing that you should be well aware of as you prepare to get pregnant or as you start to enjoy this beautiful journey is gestational diabetes. This is a type of diabetes that first manifests itself during pregnancy. Gestational diabetes occurs when a woman who has not been previously diagnosed with diabetes develops significantly high blood sugar levels in the course of her pregnancy. We understand that there are a lot of hormonal changes that take place when you become pregnant and one of the hormones that can get affected is insulin. Insulin is tasked with keeping your blood sugar levels at steady and healthy levels. Now, the question that most people ask is, if gestational diabetes disappears right after delivery, then what's the big deal? The biggest problem with gestational diabetes is that the mother ends up having spiked sugar levels that are able to pass through the placenta to the unborn baby. Remember, that what you eat is also what nourishes your baby and so it's important that you tweak your diet to include foods that are rich in vitamins, minerals and nutrients that are good for both you and the baby. The recipes provided in this book and the concepts herein are based on natural, real and healthy foods. The typical diabetes diet often features sugar-free foods which have been shown to be even more harmful as they feature artificial sweeteners. In this gestational diabetes book, we are going to focus our attention on real and natural foods that will not only help you balance your blood sugars but that will also provide your unborn baby with the best nutrition for optimal growth. Our approach focuses on
