A gyrocopter is neither an
airplane nor a helicopter
but in a class of its own.
It uses a propeller for
propulsion that can be

Access Free Gyroplane Flight

mounted tractor style like an airplane on the front of the fuselage or in a pusher configuration at the back of the fuselage. The pusher configuration is most common now.

Heber City killed in crash

...

Gyroplanes have flight controls similar to those found on both airplanes and helicopters. Because of the free-spinning rotor many gyroplanes use push-pull

Access Free Gyroplane Flight

tubes as found in helicopters. Still, yaw control, usually is from a rudder and this arrangement is accomplished with control cables in the same fashion as small airplanes.

Gyro Revolution

Unlike an airplane, the gyroplane does not stall. If airspeed gets too low it simply descends in whatever pitch attitude you have the aircraft in. The rotor blades continue to generate

Access Free Gyroplane Flight

lift just not enough to support level flight. Thus, you really never exceed any critical angle of attack like you can do in an airplane.
