The future of politics after the pandemic COVID-19 exposed the pre-existing conditions of the current global crisis. Many Western states failed to protect their populations, while others were able to suppress the virus only with sweeping social restrictions. In contrast, many Asian countries were able to make much more precise interventions. Everywhere, lockdown transformed everyday life, introducing an epidemiological view of society based on sensing, modeling, and filtering. What lessons are to be learned? *The Revenge of the Real* envisions a new positive biopolitics that recognizes that governance is literally a matter of life and death. We are grappling with multiple interconnected dilemmas—climate change, pandemics, the tensions between the individual and society—all of which have to be addressed on a planetary scale. Even when separated, we are still enmeshed. Can the world govern itself differently? What models and philosophies are needed? Bratton argues that instead of thinking of biotechnologies as something imposed on society, we must see them as essential to a politics of infrastructure, knowledge, and direct intervention. In this way, we can build a society based on a new rationality of inclusion, care, and prevention.

This book focuses on natural gas and synthetic methane as contemporary and future energy sources. Following a historical overview, physical and chemical properties, occurrence, extraction, transportation and storage of natural gas are discussed. Sustainable production of natural gas and methane as well as production and storage of synthetic methane are scrutinized next. A substantial part of the book addresses construction of vehicles for natural and synthetic methane as well as large engines for industrial and maritime use. The last chapters present some perspectives on further uses of renewable liquid fuels as well as natural gas for industrial engines and gas power plants.

Tachograph offences are the most common LGV crimes in England and Wales, closely followed by hours-law offences. The majority of these offences are the result of the unwitting actions of drivers and operators who just don't understand the law's requirements. This new edition of the unique and practical guide unravels the complicated law relating to tachograph use and drivers' hours. Fully endorsed by the Chartered Institute of Logistics and Transport, this handy pocket guide identifies: *which rules apply to which drivers, *which exemptions apply and to whom, *which records must be kept and how this should be done, *what effect working time regulations have on the transport industry, *the minimum wage rule, *the basic principles of digital tachographs, *the implementation of the Working Time Directive for road haulage drivers, * the EU's proposed changes to the existing drivers' hours law, *new law on the introduction of Digital tachographs, *advice to drivers using Smart Cards. The Guide provides the driver and truck operator with everything they need to
