The 105 mm Howitzer Motor Carriage M7 Priest was an American self-propelled artillery vehicle produced during World War 2. After the outbreak of World War II, American observers realised the need to have a self-propelled artillery vehicle with a suitably large gun suitable for supporting infantry operations.

M7 Priest self-propelled artillery | World War Photos

The development of the 105mm M7 'Priest' To give support to a fast moving infantry, it was essential to have a selfpropelled cannon. Experience with a 105mm howitzer on a Half Track led to the development to place a 105mm cannon on a full tracked vehicle. The M3 and M4 tank chassis (Lee Grant and Sherman tank) was an excellent choice.

M7 Priest Sexton

The M7 is a 105mm self-propelled artillery unit used by the United States in 1943-1945 in all theaters of military operations. It was established in 1942 based on the M3 medium tank as the main armament of artillery tank divisions. The M7 also known as the Priest. This artillery was designed to provide fire support to tank divisions.
