Mechanical testing of advanced fibre composites Dummy gauges are the preferred method for temperature compensation but, again, precise alignment is needed. It is necessary to mount the dummy gauges on an 'identical' piece of laminate, with the same orientation relative to the fibres as used for the active gauges.

Mechanical Testing of Composites. The objective of the mechanical testing of composite is the determination of mechanical parameters such as strength and stiffness that will be later used on the design of a composite structure. Referring to the classical laminate theory, 5 elastic properties (E_1 , E_2 , ν_{12} , ν_{23} and G_{12}) are necessary to calculate the elastic behaviour of a long fibre reinforced composite.
