Providing patients and their families with information and education about their psychiatric illness is a central tenet of mental health care. Discussions about diagnostic impressions, treatment options, and the risks and benefits of interventions are customary.

~~How best to engage patients in their psychiatric care~~

When evaluating patient safety, assess the patient's level of agitation, the potential for harm to self or others, as well as any safety hazards that might be accessible by the patient during the session. The psychiatrist should become familiar with the facility where the patient is located, including any immediate professional staff who will be available in case of a clinical crisis; institutional emergency procedures; and ways to obtain collateral information about the patient in question.

Psychosis occurs in a number of serious mental illnesses and not just schizophrenia - eg, depression, bipolar disorder (manic-depressive illness), puerperal psychosis and sometimes with drug and alcohol abuse. It can also occur in a number of neurological conditions and with drugs not associated with abuse.
