Plant physiology: research methods.

Plant Physiology is the study of processes within plants. Research interests related to plant growth and development within the Research Centre are varied and cover two main themes: (1) Tissue culture and micropropagation; and (2) Plant growth regulators, including herbicides. Research is both pure and applied with an emphasis on biotechnology.

The C 4 photosynthetic pathway is a CO₂-concentrating mechanism that generally enables C 4 plants to achieve greater efficiency in their use of light, nitrogen, and water than C 3 plants. To capitalize on these advantages, attempts have been made to engineer the C 4 pathway into C 3 rice (*Oryza sativa*).
