Seven Bypasses: Tenets and Techniques for Revascularization is the third book in a trilogy of bravura, technical nuance, and strategy by master neurosurgeon Michael Lawton. Like his first two books on aneurysms and AVMs, Seven Bypasses provides unparalleled firsthand insights and guidance on complex pathologies in vascular neurosurgery. The fundamentals of microsurgical anastomosis and the craft of bypass surgery are explored in depth with clinical pearls in every chapter. Lawton eloquently reveals the art of cerebral revascularization in exquisite, metaphorical detail. The surgeon performing bypass surgery is like an architect envisioning and building a beautiful structure. A bypass is designed to fit the patient's unique anatomy; blueprints designate anastomotic sites, connections, and conduits; the anastomoses are constructed; and the bypass is brought to life with pulsations, flow, and reperfusion. The book highlights Lawton's aesthetic, which has evolved from the common STA-MCA bypasses to IC-IC bypasses and elaborate arterial reconstructions. Key Highlights Stepwise discussion of the three anastomoses that form the building blocks of all bypasses: end-to-side, side-to-side, and end-to-end anastomoses Ten tenets delineate nuances of bypass: dexterity, preparing

donors and recipients, establishing a working zone, temporary arterial occlusion, arteriotomy, suturing technique, tissue handling, knot tying, patency, and aneurysm occlusion Step-by-step guidance on the seven bypasses: EC-IC bypass, EC-IC interpositional bypass, arterial reimplantation, in-situ bypass, reanastomosis, IC-IC interpositional bypass, and combination bypass Strategies and algorithms for aneurysms organized by specific anatomical sites, including the MCA and the Sylvian cistern, ACA and the interhemispheric cistern, basilar artery and the basal cisterns, and PICA and the cisterna magna More than 1,500 radiographs, operative photographs, and exquisite illustrations drawn by artist Kenneth Xavier Probst elucidate anatomy, surgical principles, and clinical cases Dr. Lawton has bequeathed a remarkable treasure of knowledge to current and future generations of neurosurgeons and their patients. The Seven series is destined to be an enduring classic for residents, fellows, and neurosurgeons specializing in the treatment of cerebrovascular disease, and for those who believe that manual dexterity and technical skill still matter. Michael T. Lawton, MD, is Chairman, Department of Neurological Surgery; Professor of Neurological Surgery; President and Chief Executive Officer, Barrow Neurological Institute; Chief of Vascular and Skull Base Neurosurgery Programs; and Robert F. Spetzler Endowed Chair in Neurosciences, Barrow Neurological Institute and St. Joseph's Hospital and Medical Center, Phoenix, Arizona, USA. This sequel to Dr. Lawton's best-selling **Seven Aneurysms** focuses on microsurgical resection techniques for AVMs found in the lobes and deep regions of the brain. It categorizes the techniques into subtypes to simplify the broad spectrum of brain AVMs neurosurgeons may encounter. The book is organized into three sections: The Tenets, which establishes eight steps for AVM resection; The Seven Arteriovenous Malformations, which describes the anatomical terrain and surgical strategies for thirty-two AVM subtypes; and The Selection section, in which Dr. Lawton discusses what he believes to be the keys to successful AVM surgery: good patient selection and best application of multiple treatment modalities. **Key Features:** Includes more than 700 spectacular full-color illustrations developed exclusively for this book Creates a system for conceptualizing and approaching AVMs Illustrates a stepwise process for AVM resection using strategic battle plans Summarizing the common AVMs encountered in practice, neurosurgeons and neurosurgical residents will find this hybrid atlas-text to be an essential part of their armamentarium.

This book aims to provide the trainee and practicing minimally invasive neurological therapist with a comprehensive understanding of the background science and theory that forms the foundation of their work. The contents are based on the tutorial teaching techniques used at the University of Oxford and are authored by the MSc Course Director. The tutorial is a learning episode focussed on a particular topic and intended to guide the student/reader through the background literature, to highlight the research on which standard practices are based and to provide the insights of an experienced practitioner.
