21st Annual National Conference of The Diabetic Foot ...

In May 2003, Alethea was the first podiatrist to be awarded the International Diabetic Foot Award, which is only awarded every four years to an individual who has played a pivotal role in developing diabetic foot care. Two per cent of the world's population have diabetes and of these, ten per cent will have a foot ulcer at any one time.

Fully updated, now in full color, this latest edition of Levin and O'Neal's The Diabetic Foot continues the work's proud tradition of providing the best diagnostic and management information for the challenging problems faced by patients with diabetic foot problems. With tips and pearls in every chapter, expansive color photographs, and its focus on team care, this classic reference is a must-have for anyone who cares for diabetic patients! Provide balanced, coordinated "team" care with multidisciplinary perspectives from diverse health professionals who care for diabetic patients with foot problems, including orthopedists, endocrinologists, vascular surgeons, podiatrists and wound care nurses. Use the exclusive Tips and Pearls in every chapter for quick review. Enjoy fresh takes on many topics with 50% new contributors. Find information more easily with a new full-color page design. Meet diagnostic challenges with color photographs of the clinical problems discussed in the book.

Fully revised and updated edition of this popular book, addressing all issues concerning the diabetic foot, one of the most prevalent problems in diabetes, with a strong emphasis on practical aspects of delivering care.

This issue of Medical Clinics covers the current best practices surrounding the management of patients with diabetic foot complications. Guest edited by Andrew Boulton, the topics covered will include ulcer prevention, interventional procedures, Charcot neuropathy, therapeutic treatments and more.

The revised and updated third edition of the essential guide to the diagnosis and treatment of the diabetic foot The revised third edition of the Atlas of the Diabetic Foot is an updated guide to the information needed for the prevention and treatment of diabetic foot problems with the aim of reducing amputations. In addition to offering the theoretical knowledge, the book is filled with more than 500 color photos from real-life cases. The cases explore a wide-variety of foot issues and the text includes information about differential diagnosis and treatment. The authors—noted experts in the field—describe the epidemiology, pathophysiology and classification of diabetic foot ulcers. In addition, the book highlights the diagnosis of the main risk factors for the diabetic foot, namely diabetic neuropathy, peripheral arterial disease and the anatomic deformities of the lower extremities. The updated third edition, include 5 videos that clearly demonstrate the methods of examination for diabetic neuropathy and peripheral arterial disease. The text includes methods of callus removal and debridement as well as offloading. In addition, it contains information on how a total contact cast is constructed. This essential resource: Contains a full colour presentation of diabetic foot cases Explains the prevention and treatment of diabetic foot problems in a revised and updated edition Includes a larger format that allows for a better quality images Offers a companion website with high-resolution digital files of photographs of the case studies presented Presents a multidisciplinary approach appropriate for a wide audience foot and diabetic professionals Written for diabetes specialists, endocrinologists and diabetic nurse specialists, podiatrists and podiatry nurse specialists, Atlas of the Diabetic Foot offers the information needed to help with the prevention, diagnosis and management of the diabetic foot.

This book provides a practical guide to the treatment of patients at risk from limb amputation. The most common presentations of the diabetic foot are presented in concise and evidence-based chapters covering the neuropathic foot, the Charcot foot, the ischemic foot, and the infected foot. Each section includes an introduction to the clinical approach as well as an algorithm illustrating the limb salvage pathway and intervention steps. *Limb Salvage of the Diabetic Foot: An Interdisciplinary Approach* aims to help the reader build an interdisciplinary understanding of the diabetic foot and its treatment and is of interest to all members of the interdisciplinary diabetic foot team including surgeons, podiatrists, radiologists, nurses, orthotists, infectious disease physicians, and endocrinologists.

Many foot problems in diabetes can be prevented and often the patients are misdiagnosed, or inappropriately referred or treated. This title will be of immense use to the audience as work of reference. Diabetes mellitus is the lack of insulin leading to uncontrolled carbohydrate metabolism, the breakdown of starches and sugars into smaller units that can be used by the body for energy. Foot ulcers occur in about 15% of diabetic patients in their lifetime and hospital admissions due to foot ulcers are very common. Foot problems mostly occur when there is nerve damage in the feet or when there is poor blood flow. * Contains colour photos and pictures * Examples for identification of the patients at risk for foot ulceration * Prompt diagnosis and treatment.

In *The Diabetic Foot: Medical and Surgical Management, 3rd Edition*, a distinguished panel of clinicians provides a thorough update of the significant improvements in knowledge surrounding the pathogenesis of diabetic foot problems, as well as the optimal healthcare treatment for this debilitating condition. The authors, many practicing at the famous Joslin-Beth Israel Deaconess Foot Center, again illuminate the successful new multidisciplinary approach now clearly required for the successful treatment of diabetic foot. Drawing on the experiences of diabetologists, podiatrists, vascular surgeons, infectious disease specialists, orthotists, plastic and orthopedic surgeons, this invaluable third edition, so timely given the continued rise of diabetes and its complications, clearly describes established techniques known to be effective. This updated edition blends new knowledge with the time-tested principles of diabetic foot management and will be of significant value to all physicians and researchers with an interest in a state-of-the-art understanding of diabetic foot.

?Public and political concern about the increasing prevalence of diabetes has prompted major concern about treatment of patients with the condition. Foot complications are some of the commonest causes of hospitalisation of people with diabetes and if not treated well often lead to amputation. There is evidence that 85% of these amputations can be prevented by better understanding of the problem and by multidisciplinary teams working more effectively together. This has been recognised and NICE have recently published guidelines on diabetic foot complications as have Diabetes UK and NHS Diabetes. These have been successful in raising awareness of the problem but the local multidisciplinary teams need clear practical advice on how to manage the foot in diabetes and deliver high quality care. With the current interest in improving outcomes for patients with foot complications this is an ideal time to make a practical evidence-based handbook available. This book will provide clear practical guidelines on how to manage all aspects of the foot in diabetes as well as an in-depth analysis of the most recent evidence. The book will be based on care pathways with algorithms for each section so it would be of practical value in any clinic in primary or secondary care. It will appeal to a wide range of health care professionals treating people with diabetes: vascular surgeons and trainees, orthopaedic surgeons, diabetes specialist nurses, podiatrists and tissue viability nurses.?

Foot ulcers occur in approximately 15% of the patients with diabetes mellitus in their lifetime, with a major impact on their quality of life. Many hospital admissions related to diabetes are due to foot ulcers, which can result in prolonged hospital stay and increased morbidity and mortality. The majority of lower limb amputations are performed in patients with diabetes every year (80,000 at least in the USA). Most of the diabetes-related foot problems can be prevented or their severity reduced by early detection and treatment. This book contributes to improved foot care through raised awareness of prevention, clinical manifestations, diagnosis and management among healthcare professionals. This comprehensive atlas, now in a second edition, provides: 520 colour photographs, graphs, tables and imaging studies Educational examples taken from genuine case reports A reference guide for identifying patients at risk for foot problems Illustration of common problems such as neuropathic and neuroischaemic ulcers, ischaemia and infection Introduction to new technologies and bioengineered materials used for the treatment of foot ulcers This book will be of interest to diabetologists, endocrinologists, podiatrists, specialist nurses, general practitioners, surgeons and clinical researchers.
