Dental materials as well as denture surfaces are often affected by colonization and biofilm formation causing specific diseases. Two main approaches were analyzed, the first one is related to a permanent modification, usually with quaternary ammonium salts while the second approach is related to the temporarily induced antimicrobial/antibiofilm property by using drug-delivery systems.

~~Dental Materials MSc—Queen Mary University of London~~

The early stages of dental materials as a science were characterized by answering how the natural and artificial material behaves. The development and discovery of new materials were based in fortuitous observations, i.e., the acid etch surface observed by Buonocore and then applied to dental enamel, or mixing materials in order to improve properties which were shown to be effective as seen in published manuscripts of Wilson and Kent since 1968 up to 1972 that culminate the development of ...
