Joining Magnesium – Magnesium Applications Group

In this study, the strain accumulation during friction stir welding of pure Mg was predicted and verified at different rotation speeds, together with the detailed microstructural evolution. The results indicate that the strain accumulation can be divided into three stages: 1) acceleration flow, 2) high velocity flow, and (III) decelerate and constant velocity flow.

Laser welding is a very capable process for magnesium-magnesium joining, but is unlikely to be successful for magnesium-aluminium. FSW offers great promise for magnesium-magnesium and magnesium-aluminium seam joints. SPR and clinching, particularly the former, are viable processes for magnesium-aluminium point joints.
