Consecutive integer problems are word problems that involve consecutive integers.

Consecutive integers are integers that follow in sequence, each number being 1 more than the previous number, represented by  $n$ ,  $n + 1$ ,  $n + 2$ ,  $n + 3$ , ..., where  $n$  is any integer. For example: 23, 24, 25, ...

## Solving Linear Inequalities in One Variable Word Problems

You subtract, bring down the next 4. 4 goes into 4 one time. You get no remainder. So  $x$  is equal to 31. So  $x$  is the smallest of the four

integers. So this right over here,  $x$  is 31.  $x$  plus 2 is going to be 33.  $x$  plus 4 is going to be 35. And  $x$  plus 6 is going to be 37. So our four consecutive odd integers are 31, 33, 35, and 37.
