An engrossing autobiographical exploration of black masculinity as a mode of racial and verbal performance.

An engrossing autobiographical exploration of black masculinity as a mode of racial and verbal performance.

With a new Foreword by April Baker-Bell and a new Preface by Vershawn Ashanti Young and Y'Shanda Young-Rivera, *Other People's English: Code-Meshing, Code-Switching, and African American Literacy* presents an empirically grounded argument for a new approach to teaching writing to diverse students in the English language arts classroom. Responding to advocates of the “code-switching” approach, four uniquely qualified authors make the case for “code-meshing”—allowing students to use standard English, African American English, and other Englishes in formal academic writing and classroom discussions. This practical resource translates theory into a concrete road map for pre- and inservice teachers who wish to use code-meshing in the classroom to extend students’ abilities as writers and thinkers and to foster inclusiveness and creativity. The text provides activities and examples from middle and high school as well as college and addresses the question of how to advocate for code-meshing with skeptical administrators, parents, and students. *Other People's English* provides a rationale for the social and educational value of code-meshing, including answers to frequently asked questions about language variation. It also includes teaching tips and action plans for professional development workshops that address cultural prejudices.

African Americans once passed as whites to escape the pains of racism. Today's neo-passing has pushed the old idea of passing in extraordinary new directions. A white author uses an Asian pen name; heterosexuals live "out" as gay; and, irony of ironies, whites try to pass as black. Mollie Godfrey and Vershawn Ashanti Young present essays that explore practices, performances, and texts of neo-passing in our supposedly postracial moment. The authors move from the postracial imagery of Angry Black White English, African American English, and other Englishes in formal academic writing and classroom discussions. This practical resource translates theory into a concrete road map for pre- and inservice teachers who wish to use code-meshing in the classroom to extend students’ abilities as writers and thinkers and to foster inclusiveness and creativity. The text provides activities and examples from middle and high school as well as college and addresses the question of how to advocate for code-meshing with skeptical administrators, parents, and students. *Other People's English* provides a rationale for the social and educational value of code-meshing, including answers to frequently asked questions about language variation. It also includes teaching tips and action plans for professional development workshops that address cultural prejudices.

Examines how generations of African Americans perceive, proclaim, and name the combined performance of race and class across genres.

The commands of the modern online world relentlessly prompt participation and encourage collaboration, connecting people in ways not possible even five years ago. This connectedness no doubt influences college writing courses in both form and content, creating possibilities for investigating new forms of writing and student participation. In this innovative volume, Sarah J. Arroyo argues for a “participatory composition,” inspired by the culture of online video sharing and framed by theorist Gregory Ulmer’s concept of electracy. Electracy, according to Ulmer, “is to digital media what literacy is to alphabetic writing.” Although electracy can be compared to digital literacy, it is not something shut on and off with the power buttons on computers or mobile devices. Rather, electracy encompasses the cultural, institutional, pedagogical, and ideological implications inherent in the transition from a culture of print literacy to a culture saturated with electronic media, regardless of the presence of actual machines. Arroyo explores the apparatus of electracy in many of its manifestations while focusing on the participatory practices found in online video culture, particularly on YouTube. Chapters are devoted to questions of subjectivity, definition, authorship, and pedagogy. Utilizing theory and incorporating practical examples from YouTube, classrooms, and other social sites, Arroyo presents accessible and practical approaches for writing instruction. Additionally, she outlines the concept of participatory composition by highlighting how it manifests in online video culture, offers student examples of engagement with the concept, and advocates participatory approaches throughout the book. Arroyo presents accessible and practical possibilities for teaching and learning that will benefit scholars of rhetoric and composition, media studies, and anyone interested in the cultural and instructional implications of the digital age.

Leading a burgeoning self-critical moment in composition studies and writing program administration, Postcomposition is a fundamental reconsideration of the field that attempts to shift the focus away from pedagogy and writing subjects and toward writing itself. In this forceful and reasoned critique of many of the primary tenets and widely accepted institutional structures of composition studies, Sidney I. Dobrin delivers a series of shocks to the system meant to disrupt the pedagogical imperative and move beyond the existing limits of the discipline. Dobrin evaluates the current state of composition studies, underscoring the difference between composition and writing and arguing that the field’s focus on the administration of writing students and its historically imposed prohibition on theory greatly limit what can be understood about writing. Instead he envisions a more significant approach to writing, one that questions the field’s conservative allegiance to subject and administration and reconsiders writing as spatial and ecological. Using concepts from ecocomposition, spatial theory, network theory, complexity theory, and systems theory, Postcomposition lays the groundwork for a networked theory of writing, and advocates the abandonment of administration as a useful part of the field. He also challenges the usefulness of rhetoric in writing studies, showing how writing exceeds rhetoric. Postcomposition is a detailed consideration of how posthumanism affects the field’s understanding of subjectivity. It also tears at the seams of the “contingent labor problem.” As he articulates his own frustrations with the conservatism of composition studies and builds on previous critiques of the discipline, Dobrin stages a courageous-and inevitably polemical-intellectual challenge to the entrenched ideas and assumptions that have defined composition studies.

In *Teaching with Poverty in Mind: What Being Poor Does to Kids' Brains and What Schools Can Do About It*, veteran educator and brain expert Eric Jensen takes an unflinching look at how poverty hurts children, families, and communities across the United States and demonstrates how schools can improve the academic achievement and life readiness of economically disadvantaged students. Jensen argues that although chronic exposure to poverty can result in detrimental changes to the brain, the brain’s very ability to adapt from experience means that poor children can also experience emotional, social, and academic success. A brain that is susceptible to adverse environmental effects is equally susceptible to the positive effects of rich, balanced learning environments and caring relationships that build students’ resilience, self-esteem, and character. Drawing from research, experience, and real school success stories, *Teaching with Poverty in Mind* reveals \* What poverty is and how it affects students in school; \* What drives change both at the macro level (within schools and districts) and at the micro level (inside a student’s brain); \* Effective strategies from those who have succeeded and ways to replicate those best practices at your own school; and \* How to engage the resources necessary to make change happen. Too often, we talk about change while maintaining a culture of excuses. We can do better. Although no magic bullet can offset the grave challenges faced daily by disadvantaged children, this timely resource shines a spotlight on what matters most, providing an inspiring and practical guide for enriching the minds and lives of all your students.

Effective science teaching requires creativity, imagination, and innovation. In light of concerns about American science literacy, scientists and educators have struggled to teach this discipline more effectively. Science Teaching Reconsidered provides undergraduate science educators with a path to understanding students, accommodating their individual differences, and helping them grasp the methods--and the wonder--of science. What impact does teaching style have? How do I plan a course curriculum? How do I make lectures, classes, and laboratories more effective? How can I tell what students are thinking? Why don't they understand? This handbook provides productive approaches to these and other questions. Written by scientists who are also educators, the handbook offers suggestions for having a greater impact in the classroom and provides resources for further research.
